| me.vinaykr.workers.dev

Summary

- Full Stack Engineer with 3+ years of experience building production-grade web applications, robust APIs, and intelligent automation across FinTech, Web3, and high-throughput product ecosystems. Specializes in building scalable backends with **Go and Node.js**, crafting interactive frontends with **Angular and React**. Deep expertise in security-focused authentication (RBAC, JWT, 2FA), PostgreSQL/PostGIS, and containerized DevOps pipelines.

Education

Siddaganga Institute of Technology Tumakuru, Karnataka

Bachelor of Engineering in Computer Science · CGPA: 8.65 July 2019 – July 2023

Experience

Liminal Custody (First Answer India Services Pvt Ltd) | Nov 2025 – Mar 2026

Software Engineer – Full Stack | Bengaluru, India

- Engineered 15+ RESTful APIs for a high-performance firewall policy management system using Node.js/Express and TypeScript, incorporating atomic bulk operations and TypeORM transaction rollbacks to ensure zero data corruption during concurrent rule updates.
- Designed a multi-tenant RBAC system integrating Auth0 with custom Node.js middleware, implementing 2FA step-up authentication with cryptographic signature validation and nonce-based replay attack prevention for high-value custody endpoints.
- Built a Redis-based caching layer for cross-chain swap quotes (LiFi Protocol) across Ethereum, Polygon, BSC, and Base—enforcing strict user-ownership and quote-expiry validation to eliminate redundant external API calls.
- Developed 3 Angular modules (Transaction Risk, Travel Rule, Transfer Policy) utilizing RxJS state management, cascading dropdown controls, and beforeunload guards to prevent unsaved configuration loss.

Light & Wonder (LNW India Solutions Pvt Ltd) | Aug 2023 – Jul 2025

Senior Associate Software Engineer | Bengaluru, India

- Engineered an AI-driven error logging and debugging tool (React + LLM API) that centralized frontend crash reports and backend telemetry, cutting bug resolution time by approximately 30% across distributed agile teams.
- Built high-throughput backend RESTful Web APIs for a core financial transaction system (Cage-Credit) covering bank account management, voucher redemption, denomination exchange, and check cashing workflows for high-reliability operations.
- Developed modular Angular components for a large-scale player management platform; optimized complex relational database queries and API payloads to reduce onboarding workflow load times by 20%.
- Authored and maintained 750+ end-to-end Cypress automated test cases, cutting manual UI testing effort by 50% and significantly reducing critical production defects.

Light & Wonder (LNW India Solutions Pvt Ltd) | Mar 2023 – Jul 2023

Full Stack Intern | Bengaluru, India

- Completed a 16-week Full Stack internship focused on C# and Angular development. Designed and developed a Game Recommendation System that integrated user feedback and rating functionalities, contributing directly to production feature deployment.

Projects

Medha API – Production Bounded-Context Go Backend | github.com/MedhaInnovations

Go · Chi · PostgreSQL/PostGIS · Redis Pub/Sub · MinIO · Docker Compose · GitHub Actions · Cloudflare Tunnel

- **Core Architecture & Performance:** Engineered a decoupled, clean-architecture REST API from scratch using Go (Chi) and a custom Handler-Service-Repository pattern; optimized performance to reliably sustain **500 RPS with a 100% success rate** under high-concurrency load testing (Vegeta).
- **Advanced Security & Auth:** Designed a secure identity architecture implementing OTP validation, third-party OAuth, and **asymmetric RS256 JWT auth token rotation** paired with cryptographically hashed storage for active refresh tokens.
- **Distributed Real-time Messaging:** Developed a full-duplex WebSocket messaging engine featuring custom JSON envelope protocols, utilizing **Redis Pub/Sub** to distribute and synchronize state natively across clustered server nodes.
- **Geospatial & Storage Pipelines:** Built high-performance proximity discovery workflows using **PostGIS GiST indexing** and ST_DWithin geofence calculations; deployed an isolated asset ingestion system featuring short-lived presigned browser uploads and a signature-preserving custom Nginx/Go media reverse proxy.
- **Infrastructure & Hybrid CI/CD:** Orchestrated environment-separated configurations deployed on a hardened Ubuntu host via Cloudflare Tunnels; integrated automated GitHub Actions pipelines with comprehensive linting (golangci-lint) and continuous verification gating.

Technical Skills

Languages: Go, TypeScript, JavaScript, C#, HTML5, CSS3

Backend & AI Integration: Node.js, Express.js, Go (Chi), ASP.NET Core, REST API Design, Microservices, pgx/v5, TypeORM, goose

Frontend: Angular, RxJS, React, Tailwind CSS

Auth & Security: Auth0, OAuth2, RBAC, JWT Session Management, 2FA, Cryptographic Signatures, Nonce Replay Prevention

Databases & Caching: PostgreSQL (PostGIS), Redis, MySQL, MongoDB, MinIO Object Storage

DevOps & Infra: Docker, Docker Compose, GitHub Actions (CI/CD), Cloudflare Tunnels, Nginx, AWS (EC2, S3), UFW

Testing & Quality: Cypress (E2E), Unit & Integration Testing, Swagger / OpenAPI
